Period for Reply -- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 08 September 2011.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ An election was made by the applicant in response to a restriction requirement set forth during the interview on ____; the restriction requirement and election have been incorporated into this action.
- 4) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 5) ☒ Claim(s) 21 is/are pending in the application.
- 5a) Of the above claim(s) ____ is/are withdrawn from consideration.
- 6) ☐ Claim(s) ____ is/are allowed.
- 7) ☒ Claim(s) 21 is/are rejected.
- 8) ☐ Claim(s) ____ is/are objected to.
- 9) ☐ Claim(s) ____ are subject to restriction and/or election requirement.

Application Papers

- 10) ☐ The specification is objected to by the Examiner.
- 11) ☐ The drawing(s) filed on ____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 12) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 13) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. ____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☐ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO/559a)
Paper No(s)/Mail Date ____
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date ____
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: ____

DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 09/08/2011 has been entered.

Claim Rejections - 35 USC § 103

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claim 21 is rejected under 35 U.S.C. 103(a) as being unpatentable over Western Communion Hosts in view of Salza (US 8,836,680) and Zimmermann (US 4,042,719).

In regard to claim 21, Western Communion Hosts disclose the altar bread recipe (page 1). Western Communion Hosts disclose using 1/2 cup whole wheat flour, 1/2 cup unbleached white flour and 1/2 cup water for each loaf (page 1). Western Communion Hosts disclose combining and kneading until well mixed, kneading for at least 5-8 minutes, letting dough rest for 5-10 minutes, and kneading again (page 1). Western Communion Hosts further discloses rolling out dough and cutting or forming into a loaf 6-7 inches round (size of a 3-lb. coffee can) by 1/2 inch thick. Western Communion Hosts discloses scoring loaves with a scoring mold, place loaves on ungreased baking

sheet, "baking at 375 to 425 degrees for approximately twenty to thirty minutes (depends on each oven, size of loaf and type of baking sheet - a cast iron skillet bakes more evenly and in less time than a cookie sheet)" (page 1).

Western Communion Hosts discloses a need in gluten free altar bread (pages 1, 6) and gluten-free altar bread recipes that include ingredients other than wheat flour (soy or rice flour, potato starch, cornstarch, xanthan gum, etc. (Pages 6-7). However, Western Communion Hosts further discloses that communion hosts made from the substance other than wheat are invalid (page 5 bottom paragraph).

Salza discloses "the production of alimentary pastes which are substantially free of glutens and therefore of proteins, and which are especially suitable for the nourishment of persons suffering from chronic uraemia and other dysfunctions" (Col. 1 lines 13-22). Thus, Salza discloses producing gluten-free (protein-free) pasta suitable for individuals suffering from gluten intolerance. Salza discloses that the "object of the invention to supply a procedure producing a starch composition capable of being formed, as by extrusion, into any possible shape of alimentary paste, or pasta, such as spaghetti, macaroni, rigatoni, etc., such composition being mainly formed of a mixture of ungelatinized starch with gelatinized starch, the latter acting as a binder for the former" (Col. 1 lines 44-50). Salza discloses use of wheat starch (Col. 2 lines 21-22). Therefore Salza discloses substituting traditional pasta ingredients with a mixture of ungelatinized and pre-gelatinized wheat starch.

In summary, Western Communion Hosts discloses preparation of communion altar bread using traditional ingredients such as wheat flour and water, recognizes a

problem of serving such bread to the gluten intolerant individuals and provides with alternative recipes containing alternative ingredients. However, these recipes are not applicable to the Communion breads, because of the use of wheat ingredients only requirement. Salza offers a solution to this problem. Salza discloses preparation of gluten-free pasta product by substituting traditional pasta ingredients with a mixture of ungelatinized and pre- gelatinized wheat starch. One of ordinary skill in the art would have been motivated to modify Western Communion Hosts in view of Salza and to substitute wheat flour mixture with ungelatinized and pre- gelatinized wheat starch mixture as taught by Salza. One of ordinary skill in the art would have been motivated to do so in order to produce a communion bread product suitable for individuals suffering from gluten intolerance. One of ordinary skill in the art would have been motivated to do so, since both references disclose a need for the gluten-free product. One of ordinary skill in the would have been motivated to do so, since substitution of wheat flour in Western Communion Hosts with ungelatinized and pre- gelatinized wheat starch of Salza would result in a product made solely of water and wheat ingredients that would satisfy strict communion bread requirement. In regard to the "wafer" recitation, it is noted that a host, as a portion of bread for Holy Communion is often served as a thin wafer. In regard to the amounts of starches and water, Salza discloses that the proportions of water to starch depend on the consistency of the final product (Col. 2 lines 11-14). Salza discloses 52-64 parts of water for 100 parts by weight of starch (Col. 1 lines 18-20). It is further noted, that Salza discloses dried product that further requires re-hydration for subsequent consumption. Therefore, one of ordinary skill in the art

would have been motivated to increase amount of water used in order to produce a product that will not require further re-hydration and is ready for the immediate consumption. In regard to forming a homogeneous mixture of warm water, pregelatinized and non-gelatinized starch, Salza discloses forming a homogeneous mixture of water, pregelatinized and non-gelatinized starch (Col. 3 claim 1). Salza is silent as to the proportion of pregelatinized starch to the non-gelatinized starch (Col. 2 lines 60-67). One of ordinary skill in the art would have been motivated to vary proportion of pregelatinized starch to the non-gelatinized starch in order to produce product having the same or similar characteristics to the gluten-containing counterpart.

Western Communion Hosts is silent as to the heating the wafer between two heated plates. Zimmermann discloses preparation of wafers by heating the batter between heated plates of the waffle-iron apparatus (Example 16). One of ordinary skill in the art would have been further motivated to modify the combination of Western Communion Hosts and Salza and to employ a conventional method of wafers preparation employing waffle-iron apparatus as taught by Zimmermann. The baking time would depend on the size and shape of the wafer desired. Thus, one of ordinary skill in the art would have been motivated to vary baking time depending on the size of the final product desired. One of ordinary skill in the art would have been motivated to do so since use of wafers of different sizes was a well established fact in the art. One of ordinary skill in the art would have been motivated to vary baking time in order to produce the product having the same or similar characteristics to the gluten-containing counterpart.

Response to Arguments

Applicant's arguments filed 09/08/2011 have been fully considered but they are not persuasive.

On pages 8-9 of the Reply to the Final Office action mailed 06/08/2011, Applicants restate rejections of record.

In response to Applicants' arguments regarding the amount of water used for the preparation of gluten-free wafer, it is noted that Western Communion Hosts disclose using 1/2 cup whole wheat flour, 1/2 cup unbleached white flour and 1/2 cup water for each loaf (page 1). Western Communion Hosts reference is relied upon as a teaching of preparation of communion altar bread using traditional ingredients such as wheat flour and water. Therefore, one of ordinary skill in the art would have been motivated to vary the amount of water in the gluten-free wafer composition depending on the desired consistency of the dough and the consistency of the final gluten-free product. It is further noted that gluten-free wafer employs only three ingredients----water, ungelatinized starch and pre- gelatinized wheat starch. When the starch mixture is formed, one of ordinary skill in the art would have been motivated to add just enough water to arrive to the traditional wafer consistency, which was well known before the Applicants' invention as shown by Western Communion Hosts.

In response to Applicants' arguments regarding Salza and amount of water (pages 9-10 of the Reply), it is noted that Salza is not relied upon as a teaching of emulsifiers used in pasta products or the amount of water used in the wafer product. Salza is relied upon as a teaching of substituting wheat flour as a traditional starch-

containing pasta ingredient with a mixture of ungelatinized and pre-gelatinized wheat starch in order to produce gluten-free product suitable for individuals suffering from gluten intolerance. It was well known in the art to use emulsifiers in the farinaceous products for the various purposes (in case of Salza for the promotion of mutual dispersion of ungelatinized and pre-gelatinized wheat starch). However, clearly emulsifier is not used as a source of starch in the pasta composition. The source of starch is a mixture of ungelatinized and pre- gelatinized wheat starch. Therefore, emulsifier is not a part of the starch ingredient necessary to produce a protein-free product. Hence, Applicants' arguments regarding Salza are not persuasive.

In response to applicant's arguments against the references individually (page 9 of the Reply), one cannot show nonobviousness by attacking references individually where the rejections are based on combinations of references. See *In re Keller*, 642 F.2d 413, 208 USPQ 871 (CCPA 1981); *In re Merck & Co.*, 800 F.2d 1091, 231 USPQ 375 (Fed. Cir. 1986). Salza is not relied upon as a teaching of emulsifiers used in past products. Salza is relied upon as a teaching of substituting wheat flour as a traditional starch-containing pasta ingredient with a mixture of ungelatinized and pre-gelatinized wheat starch in order to produce gluten-free product suitable for individuals suffering from gluten intolerance. Western Communion Hosts reference is relied upon as a teaching of preparation of communion altar bread using traditional ingredients such as wheat flour and water; and as a teaching of recognition of a problem of serving such bread to the gluten intolerant individuals by providing with alternative recipes containing alternative ingredients. Western Communion Hosts discloses preparation of communion

altar bread using traditional ingredients such as wheat flour and water, recognizes a problem of serving such bread to the gluten intolerant individuals and provides with alternative recipes containing alternative ingredients. Zimmermann is relied upon as a teaching of preparation of wafers by heating the batter between heated plates of the waffle-iron apparatus.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to VERA STULII whose telephone number is (571)272-3221. The examiner can normally be reached on 7:00 am-3:30 pm, Monday-Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Larry Tarazano can be reached on (571) 272-1515. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
